#### I. BASIS OF REPORT:

This report has been drawn on the basis of the description, page(s) 1-15, as originally filed.

page(s) NONE, filed with the demand.

and additional amendments:

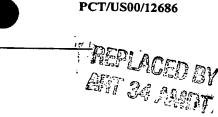

NONE

This report has been drawn on the basis of the claims, page(s) NONE, as originally filed. page(s) NONE, as amended under Article 19. page(s) 16-23 and 23/1-23/10, filed with the demand, and additional amendments:

This report has been drawn on the basis of the drawings, page(s) 1-3, as originally filed.
page(s) NONE, filed with the demand.
and additional amendments:
NONE

This report has been drawn on the basis of the sequence listing part of the description: page(s) NONE, as originally filed.
pages(s) NONE, filed with the demand.
and additional amendments:
NONE

### **CLAIMS**

#### What is claimed is:

A method for studying materials using machine-implemented feedback techniques, the steps 1. comprising: designating material for studying to provide designated material; processing said designated material to provide a query; querying a student with said query; gauging said student's response to said query; and re-querying said student according to said response; whereby said student is repeatedly queried regarding materials said student has weaker understanding in preference to materials said student has stronger understanding. The method for studying materials using machine-implemented feedback techniques of claim 1, 2. wherein said step of designating material further comprises designating electronic or digital information materials 2 selected from the group consisting of: digital text; student input; and scanned materials. The method for studying materials using machine-implemented feedback techniques of claim 2, 3. wherein said digital text is selected from the group consisting of: 2 contents of a web site; a digital book; an electronic text file; and a file of electronic information. The method for studying materials using machine-implemented feedback techniques of claim 1, 4. wherein said step of designating material further comprises: 2 designating material selected from the group consisting of: fact-based materials; fiction-based materials; handwritten information including class notes; pure equations; jokes and stories;

expressed thought processes;

audio-visual-based information.

visually-based information; audio-based information; and

10

12

2

2

10

8.

5. The method for studying materials using machine-implemented feedback techniques of claim 2, wherein said scanned text further comprises:

information scanned by a scanner.

- 6. The method for studying materials using machine-implemented feedback techniques of claim 5, wherein said scanner comprises a handheld scanner.
  - 7. The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said step of processing said designating material further comprises:

determining an item for learning present in said designated material; and determining a question for querying said student regarding said item; whereby said student may be queried regarding said item by posing said question.

The method for studying materials using machine-implemented feedback techniques of claim 7, wherein said step of determining a question for querying said student is selected from the group consisting of:

determining a drop-out question;

determining a true-false question;

determining a step-by-step multiple answer question;

determining a general knowledge question:

determining a multiple answer question;

determining a joke or story question

determining a summary or association question and

- determining an equation question.
- 9. The method for studying materials using machine-implemented feedback techniques of claim 7, wherein said step of determining a question for querying said student further comprises:

indicating a portion of said designated material to be used as said question; and

- indicating a portion of said designated material to be used as said answer.
- 10. The method for studying materials using machine-implemented feedback techniques of claim 8, further comprising:

indicating a summary question after determining a plurality of questions.

- 11. The method for studying materials using machine-implemented feedback techniques of claim 8, further comprising:
  - indicating how information relates to material that the student has previously learned after determining a plurality of questions.
  - 12. The method for studying materials using machine-implemented feedback techniques of claim 10,

2

2

2

2

2

2

wherein said plurality of questions further comprises: approximately 4 - 8 questions.

- 13. The method for studying materials using machine-implemented feedback techniques of claim 12, wherein said plurality of questions is machine defined.
- 14. The method for studying materials using machine-implemented feedback techniques of claim 10, wherein said plurality of questions further comprises:

indicating a summary question after determining a number of questions.

- 15. The method for studying materials using machine-implemented feedback techniques of claim 14, wherein said number of questions is selectable by said student.
  - 16. The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said querying said student further comprises:
    - querying said student according to information supplied by said student, said information selected from the group consisting of:

class and/or coursework information;

subject information;

project information;

- prioritization of questions according to a likelihood of material to be tested; and evaluation of prior query performance.
- 17. The method for studying materials using machine-implemented feedback techniques of claim 16, wherein said prioritization of questions according to a likelihood of material to be tested further comprises:

  prioritization of questions according to a likelihood of material to be on a specific test.
  - 18. The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said step of gauging said student's response to said query further comprises:

gauging said student's response according to said student's evaluation of an answer to said query.

19. The method for studying materials using machine-implemented feedback techniques of claim 18, wherein said student's evaluation of said answer is selected from the group consisting of:

incorrect, correct and easy, correct and difficult.

- The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said step of gauging said student's response to said query further comprises:
  - determining a type of learner said student is by analyzing said student's interaction with said query.
  - 21. The method for studying materials using machine-implemented feedback techniques of claim 20,

2

2

6

2

2

wherein said step of re-querying said student further comprises:

re-querying said student according to said type of learner said student is.

- 22. The method for studying materials using machine-implemented feedback techniques of claim 1, further comprising:
  - designating backup information, said backup information complementing said designated material, said backup information providing greater background for queries delivered to said student.
- 23. The method for studying materials using machine-implemented feedback techniques of claim 1, further comprising:
  - rating said designated material according to a possibility of being tested on said designated material.
- The method for studying materials using machine-implemented feedback techniques of claim 23, wherein said step of rating said designated material according to a possibility of being tested on said designated material further comprises:
  - said student conducting said rating.
- The method for studying materials using machine-implemented feedback techniques of claim 23, wherein said step of rating said designated material according to a possibility of being tested on said designated material further comprises:
  - rating said designated material according to a possibility of being tested on said designated material, a second student indicating said rating where said second student has or had experience with said material or a class using said material.
- 26. The method for studying materials using machine-implemented feedback techniques of claim 25, wherein said step of rating said designated material according to a possibility of being tested on said designated material further comprises:
  - accumulating data from previous students who have taken a same class and who designated and/or rated material according to a possibility of being on a specific text.
- The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said step of querying a student further comprises:
  - providing entertainment subsequent to said query.
  - 28. The method for studying materials using machine-implemented feedback techniques of claim 27, wherein said query is a final query in a group of queries.
- 29. The method for studying materials using machine-implemented feedback techniques of claim 27, wherein said step of providing entertainment further comprises:

2

2

2

2

2

2

2

PC

providing entertainment based upon criteria selected from the group consisting of: a profile associated with said student; and a response evaluation arising from a prior entertainment.

30. The method for studying materials using machine-implemented feedback techniques of claim 29, further comprising:

rating of said entertainment by said student.

31. The method for studying materials using machine-implemented feedback techniques of claim 27, further comprising:

providing advertisement in association with said entertainment.

32. The method for studying materials using machine-implemented feedback techniques of claim 31, wherein said step of providing advertisement further comprises:

rating said advertisement by said student.

33. The method for studying materials using machine-implemented feedback techniques of claim 32, wherein said step of rating said advertisement is selected from steps in the group consisting of:

rating said advertisement, said student indicating appeal of said advertisement; and

rating a product or service advertised by said advertisement, said student indicating appeal of said advertised product or service.

The method for studying materials using machine-implemented feedback techniques of claim 1, further comprising:

sharing said query with a second student.

35. The method for studying materials using machine-implemented feedback techniques of claim 34, wherein said step of sharing said query is selected from steps in the group consisting of:

sharing said query over a computer network;

sharing said query by posting said query to a database of queries accessible by a computer network.

36. The method for studying materials using machine-implemented feedback techniques of claim 35, wherein said step of sharing said query further comprises:

limiting those with whom said query may be shared.

37. The method for studying materials using machine-implemented feedback techniques of claim 1, wherein said step of processing said designated material to provide a query further comprises:

pre-processing coursework materials to provide pre-processed coursework material for direct incorporation and use by said student; and

transmitting said pre-processed coursework material to said student.

providing a machine-generated hint when the student asks for a hint;
gauging said student's response to said query including determining a type of learner said student is by analyzing said student's interaction with said query and including gauging said student's response according to said student's self-evaluation of an answer to said query, said student's self-evaluation of said answer selected from the group consisting of incorrect, correct and easy, correct and difficult;

re-querying said student according to said response and according to said type of learner said student is and according to said student's self-evaluation of a prior answer to said query;

providing entertainment based upon criteria selected from the group consisting of a profile associated with said student and a response evaluation arising from a prior entertainment:

rating of said entertainment by said student;

providing advertisement in association with said entertainment;

rating said advertisement by said student, said rating of said advertisement selected from steps in the group consisting of rating said advertisement, said student indicating appeal of said advertisement, and rating a product or service advertised by said advertisement, said student indicating appeal of said advertised product or service;

selectively sharing said query with a second student, said query subject to limitations restricting those with whom said query may be shared, said sharing of said query selected from steps in the group consisting of sharing said query over a computer network and sharing said query by posting said query to a database of queries accessible by a computer network; whereby

said student is repeatedly queried regarding materials said student has weaker understanding in preference to materials said student has stronger understanding and allowing said student to learn study materials faster and more efficiently.

40. The method for studying materials using machine-implemented feedback techniques of claim 39, further comprising:

allowing said student to override any preference system and study all questions equally.

41. The method for studying materials using machine-implemented feedback techniques of claim 39, wherein said step of processing said designated material to provide a query further comprises:

pre-processing coursework materials to provide pre-processed coursework material for direct incorporation and use by said student; and

transmitting said pre-processed coursework material to said student.

42. The method for studying materials using machine-implemented feedback techniques of claim 41, further comprising:

encrypting said pre-processed coursework material so that only said student may use said pre-processed coursework material.

43. The method for studying materials using machine-implemented feedback techniques of claim 39, further comprising:

## WO 00/70582

predesigned templates that have built-in functions to enhance learning and to help a student selects helping a student place material to be learned into said templates where said student selects material to be learned.  saving said material separate from the templates so that said material can be called up and p in a proper template for study;  assigning portions of material selected by said student in unique colors; showing said portions of said material to said student in said assigned colors; allowing said student to select which learned information said student wants to keep active in student's memory; querying said student on said selected information at defined intervals, said intervals to definable by said student; archiving information studied by said student so that it can easily be recalled by a machine at a	said
